

## Triplehalo – Halo range.

**Halo – The innovative ‘new generation’ cigarette (E-Haler™) that you can legally smoke... anywhere.** Through the appliance of science, a sharp eye on style, and attention to the environment and well being; TripleHalo introduce the Halo e-haler™ device range. A product range designed to address the critical need for a ‘healthy and safe’ alternative to conventional ‘burn smoking’ cigarettes.

At the heart of our philosophy is a good understanding of cigarettes (as a product) and its impact on health and environment, this understanding has played a crucial part in the development of the Halo device. The aim has been (and will remain) to provide smokers with a ‘health alternative’ to address the social cohesion and life style elements of smoking, while drastically reducing or eliminating all of its negative effects.

We use technology to provide a real life and healthy alternative to smoking, or more accurately, nicotine intake. This is one of the reasons you will only find pure natural edible products in our cartridges. This is a significant differentiator when considering any alternative in the wider market.

Simply put... our nicotine and water based vapour contains no carbon based poisons, other chemicals added to cigarettes, or suspicious additives in other inferior vapour based devices... just 5 edible and naturally sourced elements.

The Halo device is not only better for the user; but by using the technology in harmony with age-old techniques, it allows the process to remove burning all together (eliminating risk to others and environment). The combination of these factors makes the processes involved in the Halo device unique and totally legal to use in public and enclosed places.

**Simply—Halo is about ‘touching tomorrow... today™’** with significant health and environmental benefits, not to mention cost savings.
