

TripleHalo is proud to introduce the 'Halooka', world first electronic Shisha. The technology that has enabled us to create the Halo, CGR and Kuba has been adapted to create the Halooka.

It is important in the development of a smoking alternative device that we recognize the different cultural smoking habits. Hookahs (or Shisha pipes as some know it) are a major contributor to the global smoking culture, and it is therefore only right that a healthier smoking alternative is developed.

The aim is to bring back the social unity that is associated with the Shisha tradition and culture. Those who miss the enjoyment of the Shisha Pipes with friends and relatives, can now publically (and without risk to others) enjoy smoking in and out doors. All this without the negative aspects of 'burn smoking'.

Another key part in creating this realistic alternative is to acknowledge and provide Halooka users with the same feeling, and flavours they get from a Hookah. Hand in hand, the Halooka and its flavours provide the same feeling a Hookah does, whilst reducing your risks as a smoker.

The arrival of the Halooka creates an innovative solution for businesses who have suffered a loss to their identities since the smoking ban.
