

TripleHalo – CGR and Kuba range.

The CGR and Kuba range is about the sophistication and life style of cigars, with the flexibility of a 'healthy alternative' that you can legally use anywhere. Add the choice associated with our Halo device range (in terms of strength, flavours, and well being) and you really can touch tomorrow... today.

TripleHalo redefines the markets with Cigar style devices that are designed to address an increasing need for a 'healthy alternative' to conventional 'burn smoking' cigars.

Quality, choice and sophisticated style sit at the heart of the range. With an 'eye catching' disposable 'real paper' leaf version - Kuba™; and an advanced rechargeable wood or leather finish unit – CGR™. The flexibility is delivered in the form of 'use anywhere legally' as there is no burning (or its associated poisons and odours).

We demand the best, so you will only see high quality natural plant based products in our cartridges. This is a significant differentiator when considering any alternative in the wider market.

Simply put... our nicotine and water based vapour contains no carbon based poisons, other chemicals added to cigars, or suspicious additives... just 5 edible and naturally sourced elements.

The Cigar device is not only better for the user; but by using leading edge technology in harmony with age-old techniques, it allows the process to remove burning all together (eliminating risk to others and environment). The combination of these factors makes the processes involved in the Cigar device unique and totally legal to use in public and enclosed places.

Simply – sophistication, flexibility, quality and choice are the hallmarks of the CGR and Kuba range; and you will be amazed at the savings and value... call us and find out.
